

## **Predocctoral Research Fellowship at San Raffaele Scientific Institute, Milan, Italy**

The lab of Immunobiology of Neurological Disorders has a main interest in the biological processes associated with multiple sclerosis, an inflammatory disorder of the central nervous system. We are looking for a predoctoral research fellow to analyze immunity during neuroinflammation in human and in the experimental animal model by in vivo, ex vivo and in vitro assays.

The applicant will have a Master Degree in Biology/Biotechnology, scientific background in immunology/neuroscience and expertise in immunological techniques (e.g. immune cell separation and stimulation, flow cytometry, cytospin, immunofluorescence and confocal microscopy, proliferation assays) and, eventually, in molecular biology and animal experimentation. Fluency in English, problem solving attitude, independence in work organization and flexibility are expected.

Salary will depend on qualification and experience.

Starting date: immediate.

To apply, send your CV and 2-3 reference letters or contact names to [farina.cinthia@hsr.it](mailto:farina.cinthia@hsr.it)
