

Post-doctoral position in the Laboratory of Genome Integrity

European Institute of Oncology, Milan, Italy

A post-doctoral position is available in the newly established Laboratory of Genome Integrity at the European Institute of Oncology (Milan, Italy) led by Dr. Stefano Santaguida. We seek a highly motivated candidate fascinated by the beauty of chromosome segregation and interested in how errors in this process affect cell physiology. By applying a number of highly

integrative cutting-edge techniques (*e.g.*, CRISPR/Cas9 gene-editing, mass spectrometry), the successful candidate will study how aneuploid cells are recognized and cleared by immune cells.

Qualifications:

- Strong interest in chromosome segregation, cell cycle and cancer biology
- Technical expertise with molecular biology, cell biology (*e.g.*, immunofluorescence, flow cytometry, time-lapse microscopy) and cell culture techniques
- Able to work both independently and as part of a laboratory team
- A recent PhD in molecular, cellular or cancer biology

The position will be initially for one year with possible extensions up to three years

Salary will be commensurate with experience

Starting date: September 2019
