

## Call for Applications

### Independent Research Group Leader (m/f/d) in the Molecular Biology Division

The Molecular Biology Division at the Biomedical Center of the LMU (Chair: Peter B. Becker) is home to seven research groups studying chromatin structure and function. They employ a wide range of model organisms and methods, including biochemistry, genetics, cell and developmental biology, as well as systems and computational biology.

The Division has additional capacity to host a team funded through external resources (such as DFG Emmy-Noether Programme, ERC, Humboldt Foundation).

*We can provide:*

- A highly collegial, collaborative environment at the Biomedical Center (BMC)
- Access to excellent research infrastructure
- Support through cutting-edge core facilities including Protein Analytics, Bioimaging, Biocomputing, Flow Cytometry, Biophysics and Animal Models
- A large, Munich-wide network of chromatin researchers that facilitates collaborations and methodological exchange
- Opportunities and coaching to generate additional grant income
- Mentoring for career development and a family-friendly work environment

*We are looking for:*

- An interactive scientist with excellent track record and significant seed funding for a research team
- A strong commitment to pursue original research in chromatin biology
- Research interests that resonate with the existing themes at the BMC or that complement these productively
- Female colleagues are particularly encouraged to apply
