

One laboratory technician position is available in the Nuclear Proteomics Group at the Department of Experimental Oncology, IEO, Milan, starting immediately. The Group is primarily interested in studying chromatin structure and epigenetic patterns in cancer using Mass Spectrometry (MS)-based proteomics.

The successful candidate will be involved and trained primarily in a project concerning the epigenetic profiling of Breast Cancer patient samples by quantitative MS.

This is a **8-month fellowship position**, with the possibility of renewal for an additional year. The laboratory is located at the Department of Experimental Oncology of the European Institute of Oncology (IEO), a comprehensive Cancer Center based on state-of-the-art research laboratories and clinical facilities.

Requisites of the candidate:

- *BA degree in Biology, Biotechnology, Sanitary Biomedicine or relative disciplines awarded by an Italian university or a title obtained abroad which has been recognized as equivalent to the Italian degree;*
- *basic knowledge of the English language;*
- *theoretical background in molecular biology and biochemistry;*
- *reliability, precision and ability to work in team;*
- *previous experience in a research laboratory will be considered a plus.*
